

Local Service Business Website Redesign

Business Name: Smilin Clinic

Designer: Manahil Hussain

Tool Used: Figma

1. Project Overview

The objective of this project was to redesign the website for a local dental clinic with a focus on improving user experience and increasing lead generation. The design aims to communicate the clinic's services clearly, establish trust with visitors, and encourage users to book appointments through a simple and intuitive interface.

The website includes three primary pages:

- Homepage
- Service Detail Page
- Contact Page

The design follows modern UI/UX principles and is intended to provide a professional and user-friendly experience.

2. Target Users

The website is designed for:

- Adults seeking routine dental care
- Families looking for a trusted dental clinic
- Individuals interested in cosmetic dentistry
- Patients requiring emergency dental services

These users typically want to quickly understand the services offered, evaluate the credibility of the clinic, and schedule an appointment with minimal effort.

3. User Goals

The primary goals of visitors are to:

- Learn about available dental services.
- Build trust in the clinic.
- Contact the clinic easily.
- Book an appointment.

The interface is designed to help users accomplish these tasks with as few steps as possible.

4. Layout Structure

1. Homepage

The homepage is designed to immediately communicate the clinic's value proposition.

It includes:

- Navigation bar
- Hero banner with a strong headline
- Primary "Book Now" call-to-action
- About section
- Service overview cards
- Final call-to-action banner
- Footer with contact information

This structure ensures users receive the most important information first while maintaining a logical content flow.

2. Service Detail Page

The service page provides more detailed information about a specific treatment.

Sections include:

- Hero banner
- Benefits
- Treatment process
- Frequently Asked Questions
- Related services
- Booking call-to-action

This helps users understand the service before deciding to book an appointment.

3. Contact Page

The contact page focuses entirely on lead generation.

It includes:

- Contact information
- Appointment form
- Customer testimonials
- Final booking section

The page is intentionally simple to reduce distractions and encourage form submissions.

5. UX Design Decisions

Several UX principles were applied throughout the design.

1. Clear Navigation

The navigation bar contains only the most important pages to avoid overwhelming users.

2. Strong Call-to-Action

"Book Now" buttons are placed prominently throughout the website to guide users toward making an appointment.

3. Visual Hierarchy

Large headings, contrasting buttons, and grouped content help users scan information quickly.

4. Card-Based Layout

Services are displayed using cards, making information easier to read while maintaining a clean layout.

5. Trust Building

Customer testimonials and clinic information help establish credibility and reassure first-time visitors.

6. Consistency

Consistent typography, colors, spacing, and button styles improve usability and create a professional appearance.

6. Color Palette

The website uses a blue and white color palette commonly associated with healthcare services.

- Dark Blue – Trust, professionalism, reliability
- White – Cleanliness and simplicity
- Light Gray – Background separation and readability
- Gold Accent – Highlights important actions such as booking appointments

This combination reinforces the clinic's professional image while maintaining accessibility.

7. Typography

A clean sans-serif font was selected to maximize readability across desktop and mobile devices.

Large headings establish hierarchy while smaller body text improves readability.

8. Conversion Optimization

The website was designed with conversion in mind.

Key conversion elements include:

- Immediate call-to-action in the hero section
- Service cards that simplify navigation
- Testimonials that increase credibility
- Appointment booking form
- Multiple booking opportunities throughout the website
- Minimal navigation complexity

9. Responsiveness

Although the submission primarily presents desktop layouts, the interface was designed with responsive principles in mind.

Key considerations include:

- Flexible content sections
- Clear spacing
- Simple navigation
- Mobile-friendly component structure
- Easily tappable buttons

10. Conclusion

The final design focuses on helping users quickly find information and book an appointment with minimal effort. The project demonstrates the application of UI/UX design principles to solve a real-world business problem while creating a visually appealing and user-centered website.
